User Story 11

1. Filtering button for gender - In Progress
2. Filtering button for stalls - Canceled
3. Filtering button for amenities - In Progress
4. Filtering button for cleanliness (1 to 5) - Canceled

Sprint 4 Retro

Things to start:

- Pull changes from master before starting implementation and before sending a PR out for review so it is easier on the reviewers to discern what changes pertain to the feature being worked on
- Being proactive on making changes requested by reviewers or communicate that you will not be able to
- Reassigning of tasks earlier in sprint if no progress has been made in a reasonable time
- Joining similar tasks together (e.g. joining the amenities and gender frontend) since they'll be completed simultaneously anyways. This will also make it easier for the reviewers since there's less prs to review

Things to stop:

- Making implementation changes to review at the end of a sprint

Things to continue:

- Sending a message in discord when PRs are sent out for review and are approved
- Sending a message in discord if you'll be late/missing a meeting
- Communicating if you're unable to take on a task or pr review, so that the task can be reassigned to someone else

Things we observed:

- We were able to get more tasks done because blocking tasks were completed early in the sprint.
- Having a coding freeze was useful in giving us time to work through any bugs or testing issues in our existing code.
